

CHINMAY RAJGURU

TECHNOLOGY & INNOVATION LEADER | ENTERPRISE AI · SPATIAL COMPUTING & AI-MEDIATED REALITY · 0-TO-1 INNOVATION

Mumbai, India | +91-9892210115 | hello.chinmayrajguru@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Technology and innovation leader with 8+ years of experience turning emerging technologies into validated, scalable business initiatives across venture-backed deep tech, research-led innovation, aerospace and enterprise AI. Delivered \$30M+ in quantified business value and contributed to \$10M+ in global innovation funding. Experienced in identifying unmet needs, evaluating technology pathways, rapidly prototyping concepts, validating with users and stakeholders, building investment cases, and moving selected initiatives toward industrialisation. Ph.D. in Spatial Computing with 8+ peer-reviewed research outputs spanning AI, HCI, AR/VR and novel sound technologies — research and industry work that converge on the emerging field of AI-mediated reality and interaction: intelligent systems that alter and augment human perception, from acoustic-lens sound delivery (AUDIOZOOM) and volumetric digital humans (8i) to applied AI in industrial production.

CORE STRENGTHS

Innovation & Emerging Technology: Opportunity discovery · Technology scouting & evaluation · 0-to-1 innovation · Rapid experimentation · POC validation · Innovation roadmaps · Industrialisation

Strategy & Venture Mindset: Business-value identification · Investment-case support · Technology landscape analysis · Hypothesis validation · Design thinking · Lean experimentation

AI & Frontier Technology: Generative AI · LLMs · RAG · Agentic AI · Computer vision · Spatial computing · AI-mediated reality & interaction · AR/VR · Intelligent automation

Leadership & Ecosystems: Global cross-functional leadership · External industry collaboration · Executive communication · User research · Partnership delivery · Technology storytelling

PROFESSIONAL EXPERIENCE

Senior Project Leader — Product & AI Innovation

Abans Finserv | Mumbai, India | Apr 2026 – Present

- Own product direction and opportunity discovery for Dealer Pad, a capital-markets trading platform supporting 40+ users across deal entry, hedging, ETFs, warehouse transfers, cash and reconciliation workflows.
- Work directly with business users to uncover operational needs, validate concepts through user research and rapid mock-ups, and translate high-value opportunities into priorities for a six-engineer team.
- Identified manual regression testing as an AI-automation opportunity and independently conceived and built an internal Playwright + Claude Code testing product spanning 80+ test cases.
- Reduced full regression cycles from up to one week of manual effort to a repeatable 2–3 hour automated run with pass/fail and defect reporting.
- Embedded GenAI into discovery, requirements, ticketing and documentation workflows, compressing discovery-to-delivery turnaround on a 15-day sprint cadence.

Technical Project Lead & Enterprise AI Architect — Research & Technology

GKN Aerospace | Bengaluru, India | Apr 2023 – Mar 2026

- Identified, shaped and led emerging-technology initiatives in GKN's Research & Technology organisation, delivering \$30M+ in quantified business value through AI-enabled process innovation and enterprise architecture; contributed to investment cases supporting \$10M+ in global innovation funding.
- Explored enterprise GenAI adoption under ITAR, data-sovereignty and security constraints; evaluated deployment pathways and led rapid validation of secure on-premise LLM and RAG architectures.
- Translated technical feasibility, regulatory constraints and enterprise requirements into a scalable AI adoption pathway, helping resolve a board-level decision deadlock and reducing cloud dependency by 30%.
- Led global cross-functional innovation initiatives across the UK, Sweden, Netherlands and India, moving opportunities from early concept and proof of concept toward industrialisation.
- Identified manual wire-insertion inspection as an automation opportunity; evaluated computer vision and OCR pathways and built a YOLO-based prototype within one month to demonstrate feasibility (PyTorch/OpenCV, model training and inference on NVIDIA GPUs).
- Converted successful validation into an industrialisation roadmap and scalable solution concept projected to save 500+ manual inspection hours annually.
- Worked with the CDO and global technology stakeholders to communicate emerging-technology opportunities, align strategic priorities and build executive support for innovation initiatives.

UX Researcher & Ph.D. Candidate — Spatial Computing Innovation

University of Sussex | Brighton, UK | Feb 2019 – Jan 2023

- Co-developed AUDIOZOOM, a location-based sound-delivery system that mediates auditory reality by combining acoustic metamaterials, computer vision and spatial-computing technologies; presented at ACM SIGGRAPH Asia 2019 (Emerging Technologies).
- Worked on a privately funded industry–research collaboration with Portal Devices, applying acoustic metamaterial techniques to investigate an industrial cinema-screen acoustics problem.
- Designed and conducted human-participant validation studies across spatial audio and web-based 3D environments, translating experimental performance into user insights; research included 210+ participants and was published in Nature Scientific Reports.
- Co-authored a challenges-and-opportunities analysis of spatial sound and virtual worlds, synthesising emerging technology trends, research barriers and future application opportunities.
- Participated in the AURORA research team's BBC World Service Digital Planet recording; the research was featured internationally alongside wider science-media coverage.
- Published 8+ peer-reviewed research outputs across Nature Scientific Reports, ACM SIGGRAPH, Frontiers and JASA.

3D Pipeline Engineer — AR/VR & Volumetric Digital Humans

8i Labs | Los Angeles, CA | Mar 2018 – Dec 2018

- Built production-grade AR/VR tools and automated volumetric digital-human capture pipelines in a venture-backed deep-tech startup environment using Python and AWS.
- Explored and implemented automation opportunities across calibration and 3D rendering workflows, improving production efficiency by 15%.
- Processed and delivered 500+ immersive-media assets, bridging experimental volumetric human-capture technology with reliable production workflows.

EDUCATION

Ph.D. in Informatics — Spatial Computing & Psychoacoustics | University of Sussex, UK | 2019 – 2023

M.S. in Computer Science — AI & Game Development | Southern Illinois University, USA | 2016 – 2017

B.Tech. in Computer Engineering | SVKM's NMIMS, India | 2011 – 2015

TECHNOLOGY EXPERTISE

Generative AI, LLMs, RAG, Agentic AI, LangChain, Vector Databases, Neo4j, Computer Vision, YOLO, PyTorch, OpenCV, Python, FastAPI, Playwright, AWS, Azure, Microsoft Fabric, Purview, Power BI, Docker, Kubernetes, CI/CD, GitLab, Azure DevOps, Unity 3D, AR/VR, Spatial Computing, HCI

RECOGNITION & PROFESSIONAL SERVICE

Rookie of the Year — GKN Aerospace (2023)

Employee of the Month — GKN Aerospace (2024)

Invited Technical Reviewer — SEDE 2026

Graduate Tuition Award — Southern Illinois University (2017)

SELECTED RESEARCH

Research interests: *AI-mediated reality & interaction · human–AI interaction · perceptual & spatial computing · spatial audio · digital humans*

- Sound Localization in Web-Based 3D Environments — Nature Scientific Reports, 2022
- AUDIOZOOM: Location Based Sound Delivery System — ACM SIGGRAPH Asia (Emerging Technologies), 2019
- Spatial Soundscapes and Virtual Worlds: Challenges and Opportunities — Frontiers in Psychology, 2020
- Realising Acoustic Projectors Using Systems of Metamaterial Lenses — JASA, 2024
- Computational Design and Fabrication of Customized Gamepads — Master's Thesis, SIUC / IEEE (2017)
- Shaping Sound Like We Do With Light — Ph.D. Thesis, University of Sussex (2022)
